COVID-19 Production Status Update

As an Essential Business that supplies critical components to Healthcare, Food Service, Electronics and Medical facilities, Gary Plastic / Garyline was able to remain operational continuously during the COVID-19 pandemic.

Our primary concern has been the health and well-being of our employees and customers, so we took the recommended precautions: social distance, monitoring employees' temperatures daily, wearing masks & shields, washing hands and work stations often.

Earlier this year, we added production lines to manufacture Personal Protective Equipment (PPE) for the hospitals, health facilities and other frontline workers. There was a critical need in our region, and we are very proud to have produced millions of American-made Face Shields and Face Masks at the beginning of the pandemic when it was needed most. ***That's the Manufacturing Advantage!***

We are running at full production capacity for PPE and for Promotional & Drinkware products. We stand ready to produce what is needed for our loyal distributors.

We are a union / USA manufacturer, so our inventory is regenerated 24/5 in 40 injection and blow molding machines. We are not relying on ocean freight/container shipments, so we are available to produce even the largest orders in any color to meet your deadlines.

Thank you to everyone for your support through this difficult time.
